EXAMINER

WEISS JR, JOSEPH FRANCIS

ART UNIT PAPER NUMBER

3761

DATE MAILED: 04/07/2003

15

Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.  
09/646,140

Applicant(s)  
Von Schuckmann et al.

Examiner  
Joseph Weiss

Art Unit  
3761

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on Sep 13, 2000
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above, claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claims \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.  
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some\* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\*See the attached detailed Office action for a list of the certified copies not received.

- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s). 7 & 13 6) ☐ Other: \_\_\_\_\_

Art Unit: 3761

## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 13, recites "The element (76)" this could be referring to the blister pack element but for the presence of ref # 76, but ref # 76 is not designated as an element, ref # 79 is, ref. # 76 has been previously used to designate" a line."

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(a) as being anticipated by Friberg (PCT WO98/00351).

In regards to claim 1, Friberg discloses a blister pack element comprising a body (10) which includes a first (11) and second surface (12) having a plurality of blisters containing

Art Unit: 3761

medicament (16), wherein the blisters on the surfaces are arranged in rows running parallel to a longitudinal axis of the blister pack element (see any fig) and the blisters in each row in the first surface are configured to sit between the blisters in a co-operating row in the second surface (see figs 1e & 2d), the blisters in the first and second surface being rotationally symmetrically disposed about a longitudinal axis of the blister pack element (see any fig).

In regards to claim 2, Friberg discloses the blisters in one row of the surface being off-set/staggered with respect to the blisters in an adjacent row of that surface.(See figs 1a, 1d-1e, 2a, 2c-2d).

In regards to claim 3, Friberg discloses the blisters in the first and second surfaces configured such that the blisters of the first surface (11) are disposed in one or both spaces between and adjacent to the blisters on the second surface (12) .(see figs 1e & 2d)

In regards to claim 4, Friberg discloses the plurality of surfaces as being defined by separate elements. (11 & 12, embodiment in fig 1)

In regards to claim 5, Friberg discloses the plurality of surfaces as being defined by a single element.(10, embodiment in fig 2)

In regards to claim 6, Friberg discloses a blister pack element and a support member which supports a plurality of surfaces. (20/30)

In regards to claim 7, Friberg discloses the support member comprising a frame. (30)

***Claim Rejections - 35 USC § 103***

Art Unit: 3761

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 8-11, 14-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Friberg in view of Von Schuckmann (WO 97/40876).

In regards to claim 8, Friberg substantially discloses the instant application's claimed invention to include the blister pack unit of claim 6, but does not explicitly disclose a suction tube, including a cutting assembly configured for insertion into a blister and an inhalation channel through which powder can be inhaled. However, Von Schuckmann disclose such ("S," note the terminal end of S that has cutting abilities). The references are analogous since they are from the same field of endeavor, the medicament dispensing arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Von Schuckmann and used them with the device of Friberg. The suggestion/motivation for doing so would have been because Von Schuckmann discloses the use of such a device with a blister pack and Friberg discloses a blister pack. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention.

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather

Art Unit: 3761

than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

In regards to claim 9, the suggested device does not disclose the use of a "clip" as part of the body to retain the suction tube. However, Von Schuckmann disclose a body with a suction tube retention means (33/34) which is an interchangeable functional mechanical equivalent of the clip. The references are analogous since they are from the same field of endeavor, the respiratory arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Von Schuckmann and used them with the device of Friberg. The suggestion/motivation for doing so would have been to keep the suction tube from being lost. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention.

Also, it is noted that applicant's specification does not set forth the clip, as unexpectedly providing any new result or unexpectedly solving any new problem in the art over the prior art.

Accordingly, the examiner considers the selection of a clip to be a mere obvious matter of design choice and as such does not patently distinguish the claims over the prior art, barring a convincing showing of evidence to the contrary.

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

Art Unit: 3761

In regards to claim 10, the suggested device discloses the use of an interconnecting member (6) for connecting the suction tube to the blister pack unit to prevent suction tube separation from the blister pack unit.

In regards to claim 11, the reference noted above substantially disclose the claimed invention except for the use of a line.

It is noted that applicant's specification does not set forth the line, as unexpectedly providing any new result or unexpectedly solving any new problem in the art over the prior art.

Accordingly, the examiner considers the selection of such to be a mere obvious matter of design choice and as such does not patently distinguish the claims over the prior art, barring a convincing showing of evidence to the contrary.

In regards to claim 14, Friberg substantially discloses the instant application's claimed invention to include the blister pack unit of claim 6, but does not explicitly disclose the blister pack being combined with an inhaler. However, Von Schuckmann disclose such (See any fig). The references are analogous since they are from the same field of endeavor, the respiratory arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Von Schuckmann and used them with the device of Friberg. The suggestion/motivation for doing so would have been because Von Schuckmann discloses the use of such a device with a blister pack and Friberg discloses a blister pack. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention.

Art Unit: 3761

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

In regards to claim 15, Friberg substantially discloses the instant application's claimed invention to include the blister pack assembly of claim 8, but does not explicitly disclose the blister pack being combined with an inhaler. However, Von Schuckmann disclose such (See any fig). The references are analogous since they are from the same field of endeavor, the respiratory arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Von Schuckmann and used them with the device of Friberg. The suggestion/motivation for doing so would have been because Von Schuckmann discloses the use of such a device with a blister pack and Friberg discloses a blister pack. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention.

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

In regards to claim 16, the suggested device discloses a support unit (V) with a plurality of openings (15) for guiding the suction tube into blisters in one of a plurality of surfaces.

Art Unit: 3761

In regards to claim 17, the suggested device discloses the support unit comprising a housing (1) in which the body of the blister pack can be received with at least one wall (6) of the housing including the openings.

In regards to claim 18, the suggested device discloses the support unit further comprising a cover member (33) which can enclose the suction member when closed but not the openings.

It is noted that applicant's specification does not set forth this feature, as unexpectedly providing any new result or unexpectedly solving any new problem in the art over the prior art.

Accordingly, the examiner considers the selection of such to be a mere obvious matter of design choice and as such does not patently distinguish the claims over the prior art, barring a convincing showing of evidence to the contrary.

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

### ***Double Patenting***

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed.

Art Unit: 3761

Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

8. Claims 8-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-53 of U.S. Patent No. 6401712 in view of Friberg (PCT WO 98/00351).

US patent '712 substantially discloses the instant application's claimed invention to include an inhaler, which can also be characterized as a suction tube (S) with a cutting assembly (cutting terminus of S) configured for insertion into a blister and the suction tube has an inhalation channel (note interior of S), but does not explicitly disclose the blister pack of claims 6 or 8. However, Friberg disclose such, see the rejections to claims 1 & 6 above which are herein incorporated by reference. The references are analogous since they are from the same field of endeavor, the respiratory arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Friberg and used

Art Unit: 3761

them with the device of Von Schuckmann. The suggestion/motivation for doing so would have been because Von Schuckmann discloses the use of such a device with a blister pack and Friberg discloses a blister pack. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention.

Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

9. Claims 8-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 6520179 in view of Friberg (PCT WO 98/00351).

US patent '179 substantially discloses the instant application's claimed invention to include an inhaler, which can also be characterized as a suction tube (7) with a cutting assembly (cutting terminus of 7) configured for insertion into a blister and the suction tube has an inhalation channel (note interior of 7), but does not explicitly disclose the blister pack of claims 6 or 8. However, Friberg disclose such, see the rejections to claims 1 & 6 above which are herein incorporated by reference. The references are analogous since they are from the same field of endeavor, the respiratory arts. At the time the instant application's invention was made, it would have been obvious to one of ordinary skill in the art to have taken the features of Friberg and used them with the device of Von Schuckmann. The suggestion/motivation for doing so would have

Art Unit: 3761

been because Von Schuckmann discloses the use of such a device with a blister pack and Friberg discloses a blister pack. Therefore it would have been obvious to combine the references to obtain the instant application's claimed invention. Furthermore, such a feature is old and well known in the art, and one of skill in the art would consider such to amount to a matter of mere obvious and routine choice of design, rather than constitute a patently distinct inventive step, barring a convincing showing of evidence to the contrary.

*Conclusion*

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 5904249, 5819940, 5794781, 5695063, 5595175, 5533502, 4911304, 4838425, 4340141

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Joseph F. Weiss, Jr., whose telephone number is (703) 305-0323. The Examiner can normally be reached from Monday-Friday from 8:30 AM to 4:30 PM. If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Weilun Lo, can be reached at telephone number (703) 308-1957. The official fax number for this group is (703) 305-3590 or x3591. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0858.
